

★ SOLAR POWER INITIATIVE

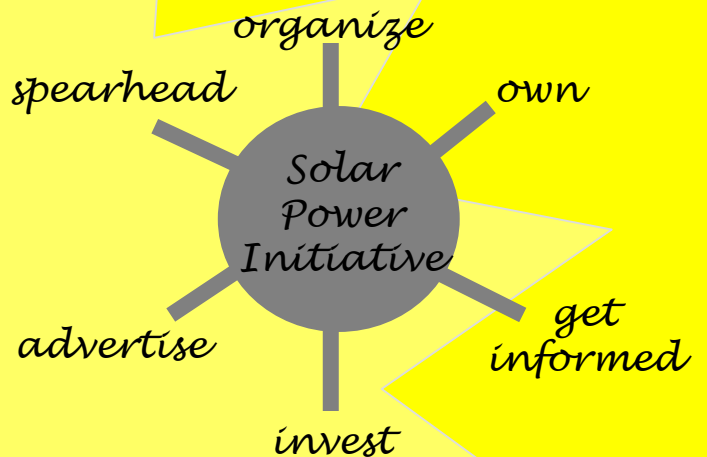

Do you want to see a large, shared solar power system happen here in FBKS?

★ We want to promote the installation of a large solar system (>30kW).

This would be the first of its kind and a unique possibility for EVERYONE to participate, but we do need YOUR help to make it happen.

You can take action and organize, invest or even spearhead aspects of this solar power initiative!

Our vision

★ Already, we have reserved an ideal spot: elevated and on a south facing hillside, with easy access for installation and maintenance.

★ We hope to find enough interested people in Fairbanks to form a long term group tasked with organizing the installation & maintenance as well as the investment in the system. The total cost would be broken up into affordable shares, so everyone is able to buy oneself a solar power share!

★ We would feed the produced energy into the grid system via the SNAP program (GVEA) and get reimbursed for the amount of energy produced. This money will of course be divided proportionally amongst all shareholders of the solar power system. ↘

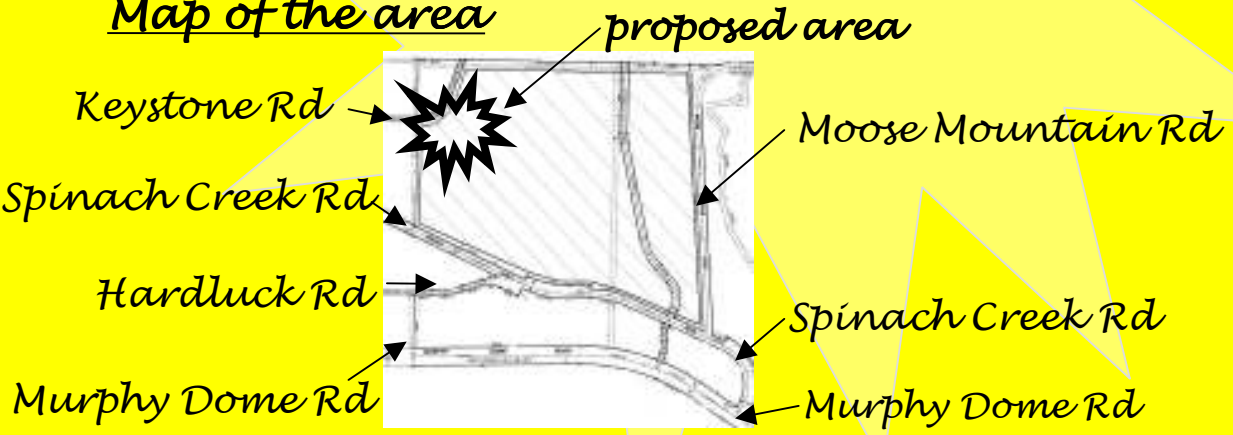

★ The time is ripe to work together NOW

- Solar technology is now Alaska proven and available
- 30% governmental breaks for renewable energy systems apply only till 12/2008
- Ideal location is available and neighborhood supportive of the idea
- We already established connections with local suppliers and they are ready for action (SNAP, ABS, FBKS remote power)

★ Who we are...

... the "UNCOMMON GROUND-neighborhood initiative", a group recently formed to direct the land development that is going to take place on 165 acres along Spinach Creek Rd --which is our direct neighborhood.
